EXPERIENCE

Vedi Collections — Full-Stack Developer (Client Project) 2026 vedicollections.com

- Designed, built, and shipped a production e-commerce platform as a freelance engagement for a paying client — product catalog, orders, and admin panel — with a Next.js frontend and FastAPI backend on Supabase PostgreSQL.
- Deployed the frontend on Vercel and backend on Render behind a custom domain; integrated Google Ads conversion tracking to measure the client's advertising campaigns.

PROJECTS

Tendr — Gamified Productivity App (Solo) FastAPI, PostgreSQL, React 19, TypeScript [GitHub](#) | [Live](#)

- Built backend-first with 30+ REST endpoints (tasks, focus sessions, virtual-pet economy, analytics); engineered a server-enforced XP system — rewards scale by task priority and decay daily when overdue — computed at the API layer, never trusted to the client.
- Implemented dual authentication flows: bcrypt email/password with 6-digit OTP email verification, and Google OAuth2 with a short-lived pending JWT for new-user onboarding.
- Launched solo on Product Hunt and ranked #66 on launch day.

Video Object Remover — AI Video Inpainting (Solo) SAM2, ProPainter, FastAPI, Docker [GitHub](#) | [Demo](#)

- Built an end-to-end pipeline chaining click-to-select segmentation (SAM2) into ProPainter inpainting; chose Server-Sent Events over synchronous API calls to stream live progress during 30–60s inference runs without request timeouts, with WebSocket updates from the FastAPI backend.
- Resolved GPU out-of-memory failures at 720p via fp16 inference and chunked processing; Dockerized and deployed on Hugging Face Spaces.

Chikitsa Cloud — Medical Records Platform (Team) FastAPI, PostgreSQL, Supabase [GitHub](#) | [APK](#)

- Developed a cloud medical-record system with 35 REST endpoints for secure document storage and sharing; used UUID-based schemas over sequential IDs to prevent enumeration attacks, with OAuth2/JWT authentication and Supabase-backed file storage.
- Implemented real-time nearby-hospital discovery using OpenStreetMap data.

Klipo — Multilingual Subtitle & Captioning Engine (Solo) Python, FastAPI, ffmpeg [Live](#)

- Currently building a multilingual subtitle and captioning engine on top of open-source ML models, with support for multiple Indian languages.
- Designed a user-editable captioning workflow with customizable subtitle styling, rendered and burned into video via ffmpeg.

TECHNICAL SKILLS

Languages:	Python, JavaScript, TypeScript
Backend:	FastAPI, SQLAlchemy, Pydantic, REST APIs, WebSocket, Server-Sent Events
Databases:	PostgreSQL, Supabase, SQLite
Auth & Security:	OAuth2, JWT, bcrypt
DevOps & Tools:	Docker, Git, Render, Vercel, Hugging Face Spaces, Postman, Swagger, Linux
Frontend:	React, Next.js, Flutter

EDUCATION

B.Tech, Computer Science Engineering 2024 – 2028 (expected)
Guru Gobind Singh Indraprastha University (GGSIPU), Delhi
